#1 How to design,
create, and support
dedicated languages
(DSLs)?

#2 How to transform
models/programs?

#3 How to manage
variability/variants?

#4 How do frameworks
internally work?

Plan

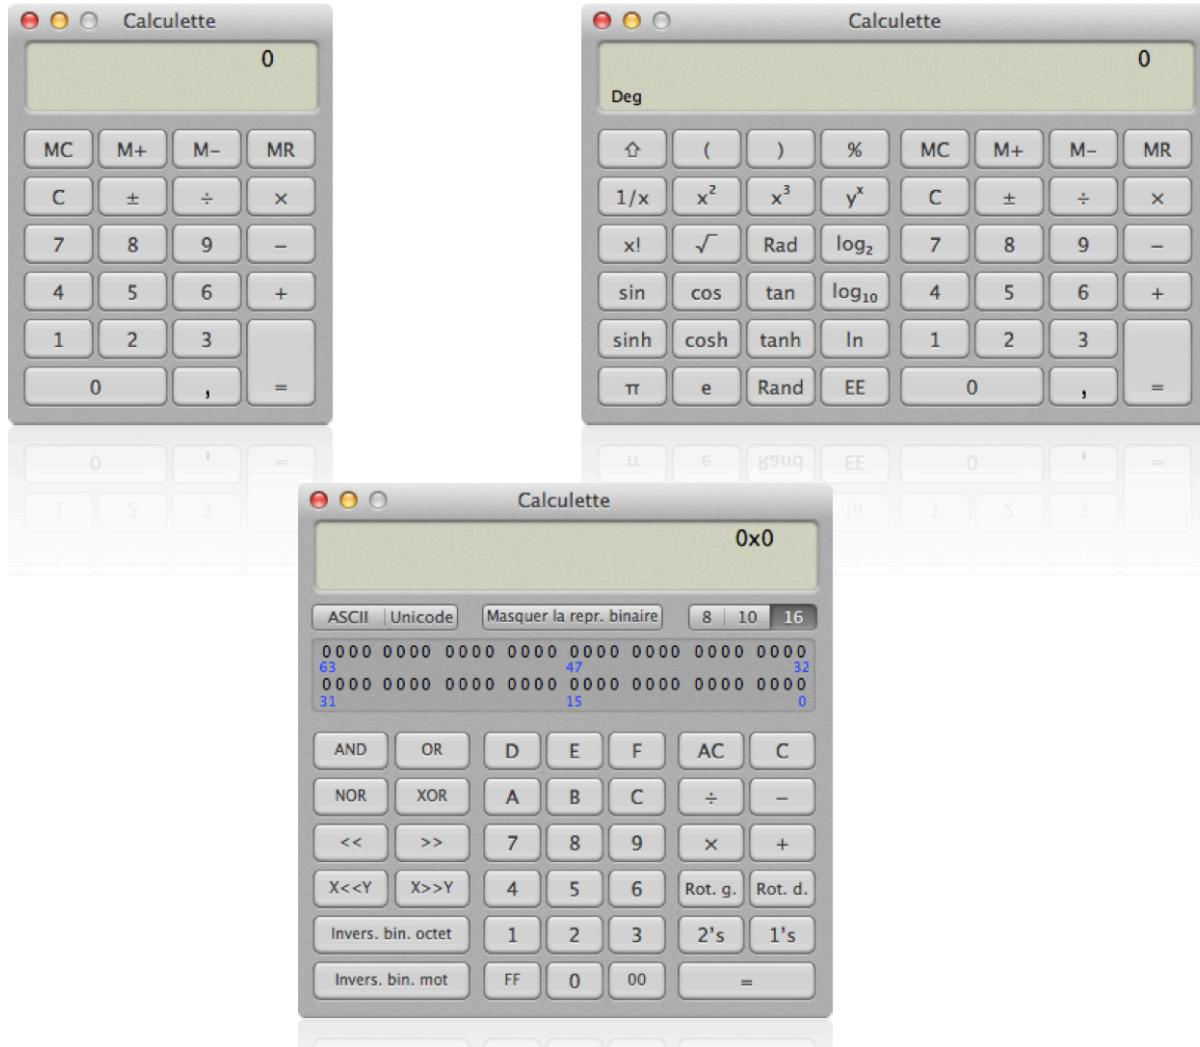

- Challenges and Overview
 - Developing billions of software product is hard but now a common practice
- Implementing Variability
 - Revisit of existing techniques and curriculum
- Specificity of Product Line Engineering
 - Process, methods
- Feature Models
 - Defacto standard for modeling product lines and variability

Contract

- The idea of software product lines and variability
 - You will be able to recognize this class of systems
 - Aware of the complexity
 - Aware of the specific development process
 - Aware of existing techniques
- Feature modeling
 - A widely used formalism for modeling product lines and configurable systems in a broad sense

Software Product Line and Variability Engineering

Challenges and Overview

```
macher-wifi:getting-started macher1$ yo jhipster
```

I'm all done. Running `npm install & bower install` for you to install the required dependencies.

```
JHIPSTER GENERATOR
  JHipster
  JHipster
  JHipster
  JHipster
```

Welcome to the JHipster Generator v2.17.0

```
? (1/15) What is the base name of your application? jhipster
? (2/15) What is your default Java package name? com.mycompany.myapp
? (3/15) Do you want to use Java 8? Yes (use Java 8)
? (4/15) Which *type* of authentication would you like to use? (Use arrow keys)
> HTTP Session Authentication (stateful, default Spring Security mechanism)
  OAuth2 Authentication (stateless, with an OAuth2 server implementation)
  Token-based authentication (stateless, with a token)
```

« A set of programs is considered to constitute a **family**, whenever it is worthwhile to study programs from the set by **first studying the common properties** of the set and then determining the **special properties** of the individual family members »

aka Variability

David L. Parnas — “On the design and development of program families” in Transactions on Software Engineering, SE-2(1):1–9, 1976

Description

A customizable battery case to hold batteries while traveling. Configurable for the number of batteries and type (as long as they're cylindrical). This is a updated version of the customizable battery carrier ([thingiverse.com/thing:51376](#)), re-designed to work without magnets as requested by GregFisk25.

Variability in time vs in space

- **Variability in Time (releases)**
 - the existence of different **versions** of an artifact that are valid at different times
- **Variability in Space (variants)**
 - the existence of an artifact in different **shapes** at the same time

Benefits

Improve product reliability

Improve usability

Improve consistency across products...

Benefits

Reduce production costs

Reduce certification costs

Shorten time-to-market

Variant

Question

Give three examples of software product lines
(also called configurable systems or variability-intensive systems)

Variability

“the ability of a system to be efficiently extended, changed, customized or configured for use in a particular context”

Mikael Svahnberg, Jilles van Gurp, and Jan Bosch (2005)

A large, intricate 3D white maze is set against a light gray background. The maze consists of many interconnected paths and dead ends, creating a complex network of levels and corners. It occupies the entire frame, from the top left to the bottom right.

Variability = Complexity

33 features

a unique variant for every
person on this planet

320^{optional, independent}
features

more variants than estimated
atoms in the universe

2000 features

10000
features

The development of a
family of software systems

differs from the development of
a **single** software system

**THANKS CAPTAIN
OBVIOUS**

« The development of a
family of software systems
differs from the development of
a **single** software system »

Reuse	<i>Commonality</i>
Customization	
Automation	<i>Variability</i>

A photograph of a car assembly line. In the foreground, a worker wearing a white shirt and red overalls is working on the interior of a silver car. The car's door is open, and the worker is leaning into the open door frame. Behind the worker, several other cars are lined up along the assembly line. The background shows the industrial interior of a factory with various equipment and structures.

Assembly Line and Mass Customization

**Reuse
and
Mass Customization**

Starting from scratch?

A wide-angle photograph of a massive aircraft assembly facility. In the center, a large white aircraft with blue and red tail markings is being worked on. To its left, another aircraft is visible. The floor is filled with workers at various stations, some sitting at desks with computer monitors. The ceiling is high with a complex steel truss structure and numerous bright lights. Scaffolding and ladders are scattered around the aircraft, indicating active construction and maintenance work.

You cannot start from scratch

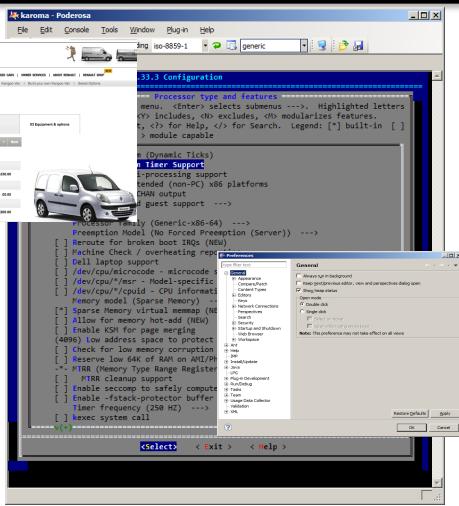

“a set of software- intensive systems that share a common, managed set of features satisfying the specific needs of a particular market segment or mission and that are developed from a common set of core assets in a prescribed way” [Clements et al., 2001]

I'm all done. Running `npm install & bower install` for you to install the required dependencies.

JHIPSTER STACKER FOR JAVA EDIENS

Welcome to the JHipster Generator v2.17.0

```
? (1/15) What is the base name of your application? jhipster
? (2/15) What is your default Java package name? com.mycompany.myapp
? (3/15) Do you want to use Java 8? Yes (use Java 8)
? (4/15) Which *type* of authentication would you like to use? (Use arrow keys)
> HTTP Session Authentication (stateful, default Spring Security mechanism)
OAuth2 Authentication (stateless, with an OAuth2 server implementation)
Token-based authentication (stateless, with a token)
```

Domain Engineering

Application Engineering

« the investments required to develop the reusable artifacts during **domain engineering**, are outweighed by the benefits of deriving the individual products during **application engineering** »

Jan Bosch et al. (2004)

Software Product Line and Variability Engineering

A revisit of your cursus

What is new?

Family vs single systems

Focus on reuse

Domain engineering

Factoring out commonality

Managing variability

« variability »

Is it really new?

Parameter

```
Administrator: C:\Windows\system32\cmd.exe
C:\Users\kaestner.INFORMATIK.000>dir /?
Displays a list of files and subdirectories in a directory.

DIR [drive:][path][filename] [/A[[:l]attributes]] [/B] [/C] [/D] [/L] [/N]
  [/O[[:l]sortorder]] [/P] [/Q] [/R] [/S] [/T[[:l]timefield]] [/W] [/X] [/4]

[drive:][path][filename]
      Specifies drive, directory, and/or files to list.

/A          Displays files with specified attributes.
attributes   D  Directories                  R  Read-only files
              H  Hidden files                A  Files ready for archiving
              S  System files                I  Not content indexed files
              L  Reparse Points             -  Prefix meaning not
/B          Uses bare format (no heading information or summary).
/C          Display the thousand separator in file sizes. This is the
            default. Use /-C to disable display of separator.
/D          Same as wide but files are list sorted by column.
/L          Uses lowercase.
/N          New long list format where filenames are on the far right.
/O          List by files in sorted order.
sortorder    N  By name (alphabetic)        S  By size (smallest first)
              E  By extension (alphabetic)  D  By date/time (oldest first)
              G  Group directories first   -  Prefix to reverse order
/P          Pauses after each screenful of information.
```

Parameter -i in grep

```
1 int match_icase;
2
3 int main (int argc, char **argv)
4 {
5     [...]
6     while ((opt = get_nondigit_option (argc, argv, &default_color))
7         switch (opt)
8         {
9             [...]
10            case 'i':
11                match_icase = 1;
12                break;
13            }
14        }
15
16
17 static const char *
18 print_line_middle (const char *beg, const char *lim,
19                     const char *line_color, const char *match_color)
20 {
21     [...]
22     if (match_icase)
23     {
24         ibeg = buf = (char *) xmalloc(i);
25         while (--i >= 0)
26             buf[i] = tolower(beg[i]);
27     }
}
```

Global configuration

```
class Config {  
    public static boolean isLogging = false;  
    public static boolean isWindows = false;  
    public static boolean isLinux = true;  
}  
class Main {  
    public void foo() {  
        if (isLogging)  
            log(„running foo()“);  
        if (isWindows)  
            callWindowsMethod();  
        else if (isLinux)  
            callLinuxMethod();  
        else  
            throw RuntimeException();  
    }  
}
```

Configuration

httpd.conf -- win32 Apache Building a Web Server, for Windows

```
Listen 80

    dregs->dma_addr3 = (addr ) & 0xff;  
}  
.....
```

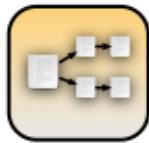

Replicate & Specialize

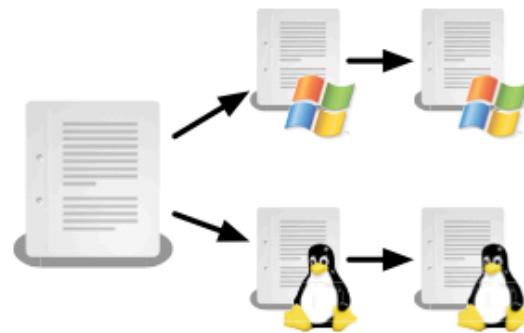

Clone to reuse and adapt existing solutions

- + Less effort needed
- Long-term cost outweighs short-term benefit
- ~ Cost of refactoring rises over time

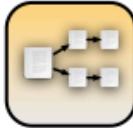

Platform Variations

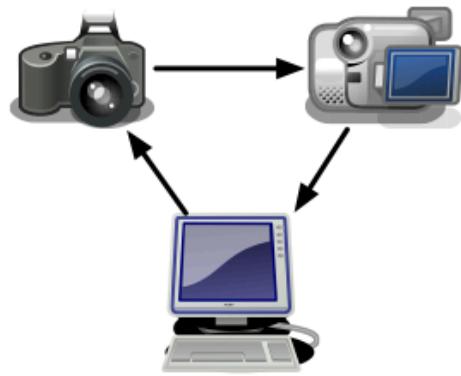

**Clone existing code and fix
low level platform interaction**

- + Avoid complexity of virtualization layer
- Hard to propagate bug fixes
- ~ Ensure consistent behavior of all clones

Hardware Variations

Clone existing driver

- + No risk of changing existing driver
- Code growth
- ~ Dead code can creep into system

Inheritance (OOP)

Base Class encapsulate commonalities

Derive classes specialize peculiarities

Generic Programming

C++ template

```
template <typename T>
T max(T x, T y)
{
    return x < y ? y : x;
}
```

Generics in Java

```
public interface List<E> {
    void add(E x);
    Iterator<E> iterator();
}
public interface Iterator<E> {
    E next();
    boolean hasNext();
}
```

A screenshot of the Renault Vans website. The top navigation bar includes links for CARS, VANS, ELECTRIC VEHICLES, RENAULT BUSINESS, USED CARS, OWNER SERVICES, ABOUT RENAULT, and RENAULT SHOP. Below the navigation, a breadcrumb trail shows Renault UK > Renault Vans > New Kangoo Van Range > Kangoo Van > Build your own Kangoo Van > Selected Options. The main content area is titled 'NEW KANGOO VAN RANGE' and contains three tabs: '01 Preferences', '02 Version', and '03 Equipment & options'. Under 'OPTIONS', there are sections for 'COMFORT' (Central storage console & armrest between seats, £50.00), 'DRIVING' (Electric door mirrors, £0.00), and 'SAFETY & SECURITY' (ESC (Electronic Stability Control) with traction and understeer control, £200.00). To the right, a silver Renault Kangoo van is shown. The URL in the browser is www.renault.com/vans/build-your-own/kangoo-van-range/selected-options.

A screenshot of the Eclipse IDE. The central part shows a code editor with Java code for 'Notepad.java', 'Actions.java', and 'Main.java'. The code includes various annotations like @Override, @Data, and @Builder. The 'General' preferences panel is open on the left, showing settings for 'Always run in background', 'Keep next/previous editor, view and perspectives dialog open', and 'Show heap status' (which is checked). It also includes options for 'Open mode' (Double click or Single click) and 'Select on hover' or 'Open when'. A note at the bottom says 'Note: This preference is shared with the Java perspective'. The right side of the interface shows the 'ASTView' panel, which displays the parse tree for the selected Java file, showing nodes for OC, IERS, RUTOR, PARAMETERS, METERS, DIMENSIONS, VN_EXCEPTIONS, and statements like IFSTATEMENT, THEN_STATEMENT, ELSE_STATEMENT, and IFSTATEMENT with specific line numbers (e.g., [4493, 805], [4529, 80], [4615, 77], [4690, 0]).

A photograph of an old, green-painted pickup truck that has been left to decay in a field. The truck is heavily rusted, particularly on the body and the front fenders. The driver's side door is open, revealing the interior frame and some remaining mechanical components. The truck is positioned in front of a dense thicket of green bushes and tall grass. In the bottom left corner, there are some wooden planks and metal debris, suggesting a construction or demolition site nearby.

Unused flexibility

Illegal variant

Feature Models

A screenshot of the karmo configuration tool. It shows a list of kernel features with checkboxes. Some features are grouped under titles like "Processor Type and features". A legend at the bottom indicates: "Arrow keys navigate the menu. <Enter> selects submenus -->. Highlighted letters are hotkeys. Pressing <?> includes, <>> excludes, <Mod> modularizes features. Press <Ctrl>+<Mod>+<Mod> to search. Legend: [+] built-in [] excluded [Mod] module [Mod] <> module capable".

Variability Model

A screenshot of an IDE showing Java source code. The code is annotated with various colors (green, yellow, orange, blue) and highlights. On the right side, the ASTView tool is open, showing a tree structure of the code's abstract syntax tree (AST). The tree includes nodes for statements, expressions, method invocations, and if statements.

Exercise

- JHipster (<http://www.jhipster.tech/>), let us consider the last version (November, 2017)
 1. List all options of Jhipster
 2. Propose some options that Jhipster could propose/support
 3. Describe some combinations of options of Jhipster that are not possible; justify why!

Look at homepage, documentation, and... source code!

Bref
as a product line

ÉTAPE 2 : CHOISIS 3 BONS SOUVENIRS

ÉTAPE 3 : JE REGARDE MON ÉPISODE UNIQUE

DEJÀ 1 796 108 ÉPISODES GENÈRES.

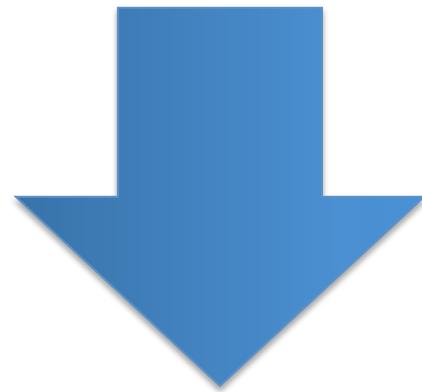

```
foo1.videogen ✘

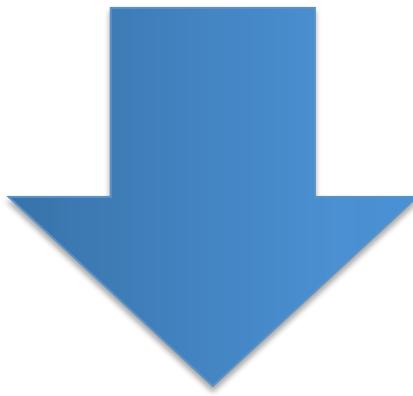

mandatory videoseq v1 "https://www.youtube.com/watch?v=PJNi1uYhV5w"
optional videoseq v2 "v2Folder/v2.mp4"
alternatives v3 {
    videoseq v31 "v3/seq1.mp4"
    videoseq v32 "v3/seq1.mp4"
    videoseq v33 "v3/seq1.mp4"
}

alternatives v4 {

    videoseq v42 "v4/seq1.mp4"
}
mandatory videoseq v5 "https://www.youtube.com/watch?v=ezKx-S0LiNQ"
```

 FFmpeg

```
VideoGen {  
    mandatory videoseq v1 "V1/v1.mp4"  
    optional videoseq v2 "v2folder/v2.mp4"  
    alternatives v3 {  
        videoseq v31 "v31.mp4"  
        videoseq v32 "v32.mp4"  
    }  
}
```

model-to-text

```
fmVideoGen = FM (VideoGen: v1  
[v2] v3; v3: (v31|v32); )
```

FAMILIAR

Product line and variability everywhere

- Your video generator is a product line
 - Generalization of Bref generator
 - It is even a configurable generator
 - There is an hidden feature model in every VideoGen specification
- Xtext is a configurable generator (see MWE2)
- JHipster is a product line
- ffmpeg is a product line

How MDE (IDM) can help

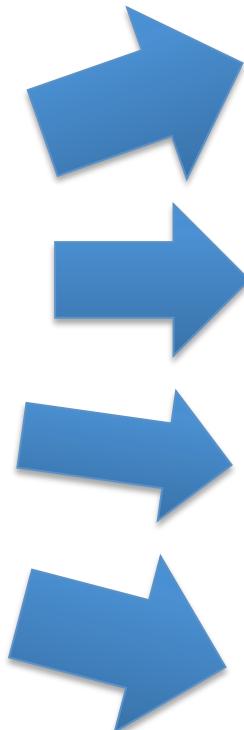

Software Product Line Engineering

Generative approach

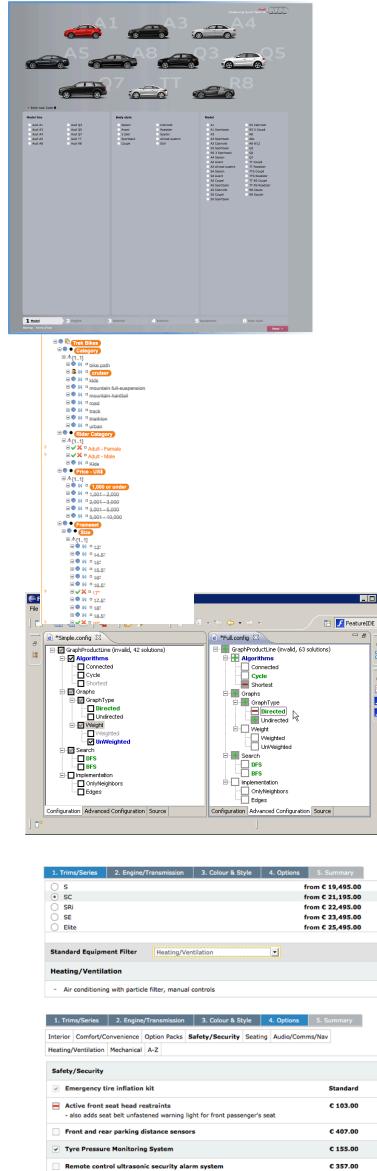

- Programming the generation of programs
 - Very old practice
 - Metaprogramming: generative language and target language are the same
 - Reflection capabilities
- Generalization of this idea:
 - from a specification written in one or more textual or graphical domain-specific languages
 - you generate **customized variants**

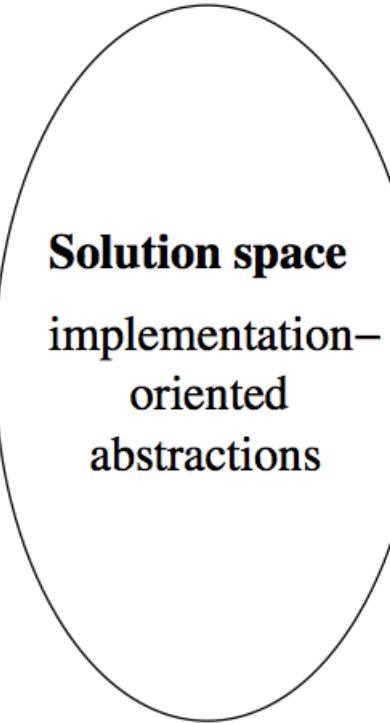

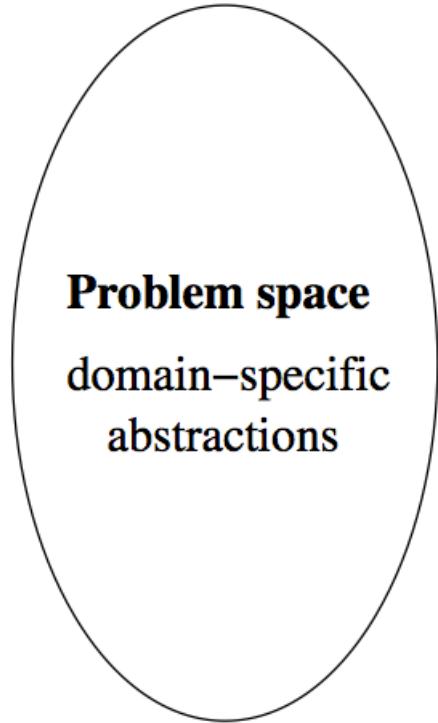

Modeling and implementing system families such that a desired system can be automatically generated from a specification written in one or more textual or graphical domain-specific languages.

Models
And
Languages

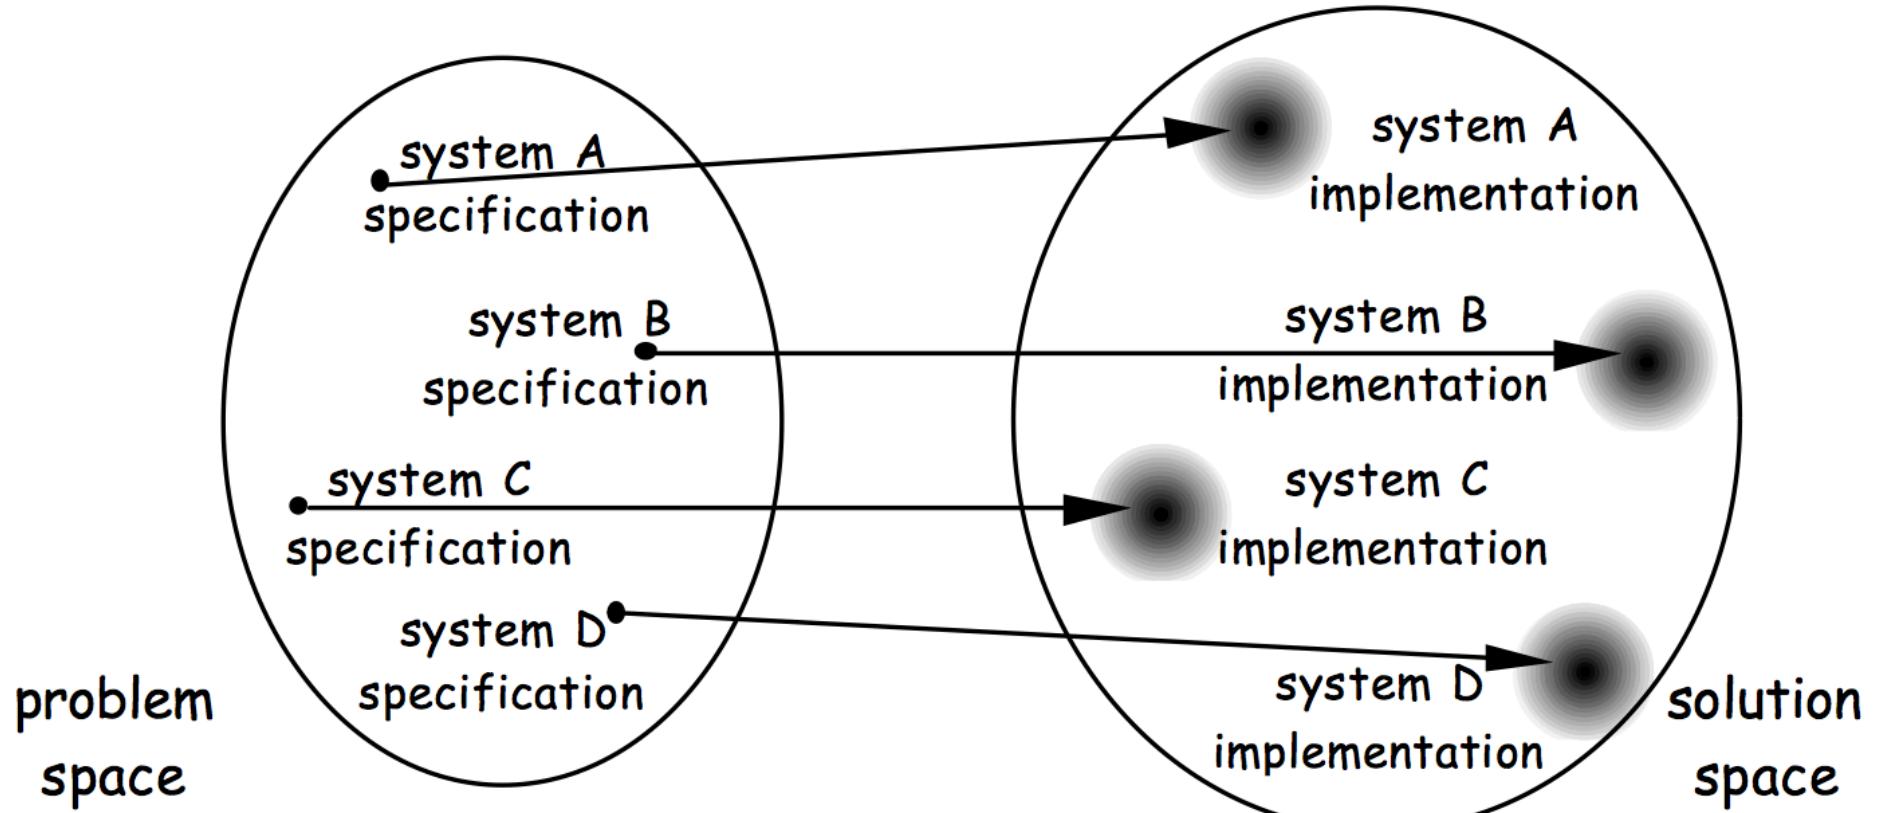

Models And Languages

[Czarnecki and Eisenecker 2000]

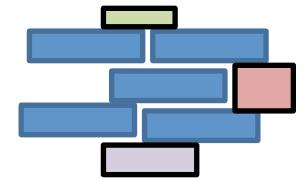

[Czarnecki, PhD thesis]

Developing Product Lines

Metamodels, DSLs, and Transformations to the rescue

- Domain Engineering
 - Domain Models
 - Level of abstraction
 - Domain-specific modeling languages
 - (visual or textual) syntax, precise semantics
 - analyzed (verification)
 - Traceability between the artefacts
- Application Engineering
 - Model transformations (automation)
- Reduce the gap

Summary

- **Software product line engineering**
 - Mass customization
 - Family of software intensive systems
 - Systematic reuse
 - Domain engineering
 - Variability management
 - **Variability** everywhere
 - Applied and applicable to many industries and domains
 - **Modeling and implementing** variability: an overview
-
